

Two grammars, one speaker: the case of Low German verbal clusters

Background

West Germanic (WG) verbs cluster in clause-final position

1. ... dass Markus ein Buch gelesen₂ hat₁
... that M. a book read has

2. ... dass Markus ein Buch hat₁ lesen₃ müssen₂
... that M. A book had read must

Logically possible orders (numbers show order of semantic selection)
2 verb clusters:
■ 1-2 (Mod-V/Aux-V)
■ 2-1 (V-Mod/V-Aux)
3 verb clusters:
■ 1-2-3 (Aux-Mod-V) ■ 1-3-2 (Aux-V-Mod)
■ 2-1-3 (Mod-Aux-V) ■ 2-3-1 (Mod-V-Aux)
■ 3-1-2 (V-Aux-Mod) ■ 3-2-1 (V-Mod-Aux)

- Three-verb clusters as in (2) show the **Infinxitivus Pro Participio Effect (IPP)**: modal shows up as an infinitive (*müssen*), not a participle (**gemusst*).
- IPP correlates with presence of *ge*-prefix (Hoeksema 1980; Lange 1981; Vanden Wyngaard 1994; Zwart 2007) and reordering (Hoekstra 1994; De Schutter 1995)
- WG languages and dialects show considerable order variation in these clusters:
[...] superregional possibilities could be seen as the sum of options found in several dialects (Wurmbrand, 2017: 13).

Research questions:

- What is the acceptability of various orders in Low vs. High German?
- Is there transfer in judgments from both varieties and in which direction?

We investigated this in:

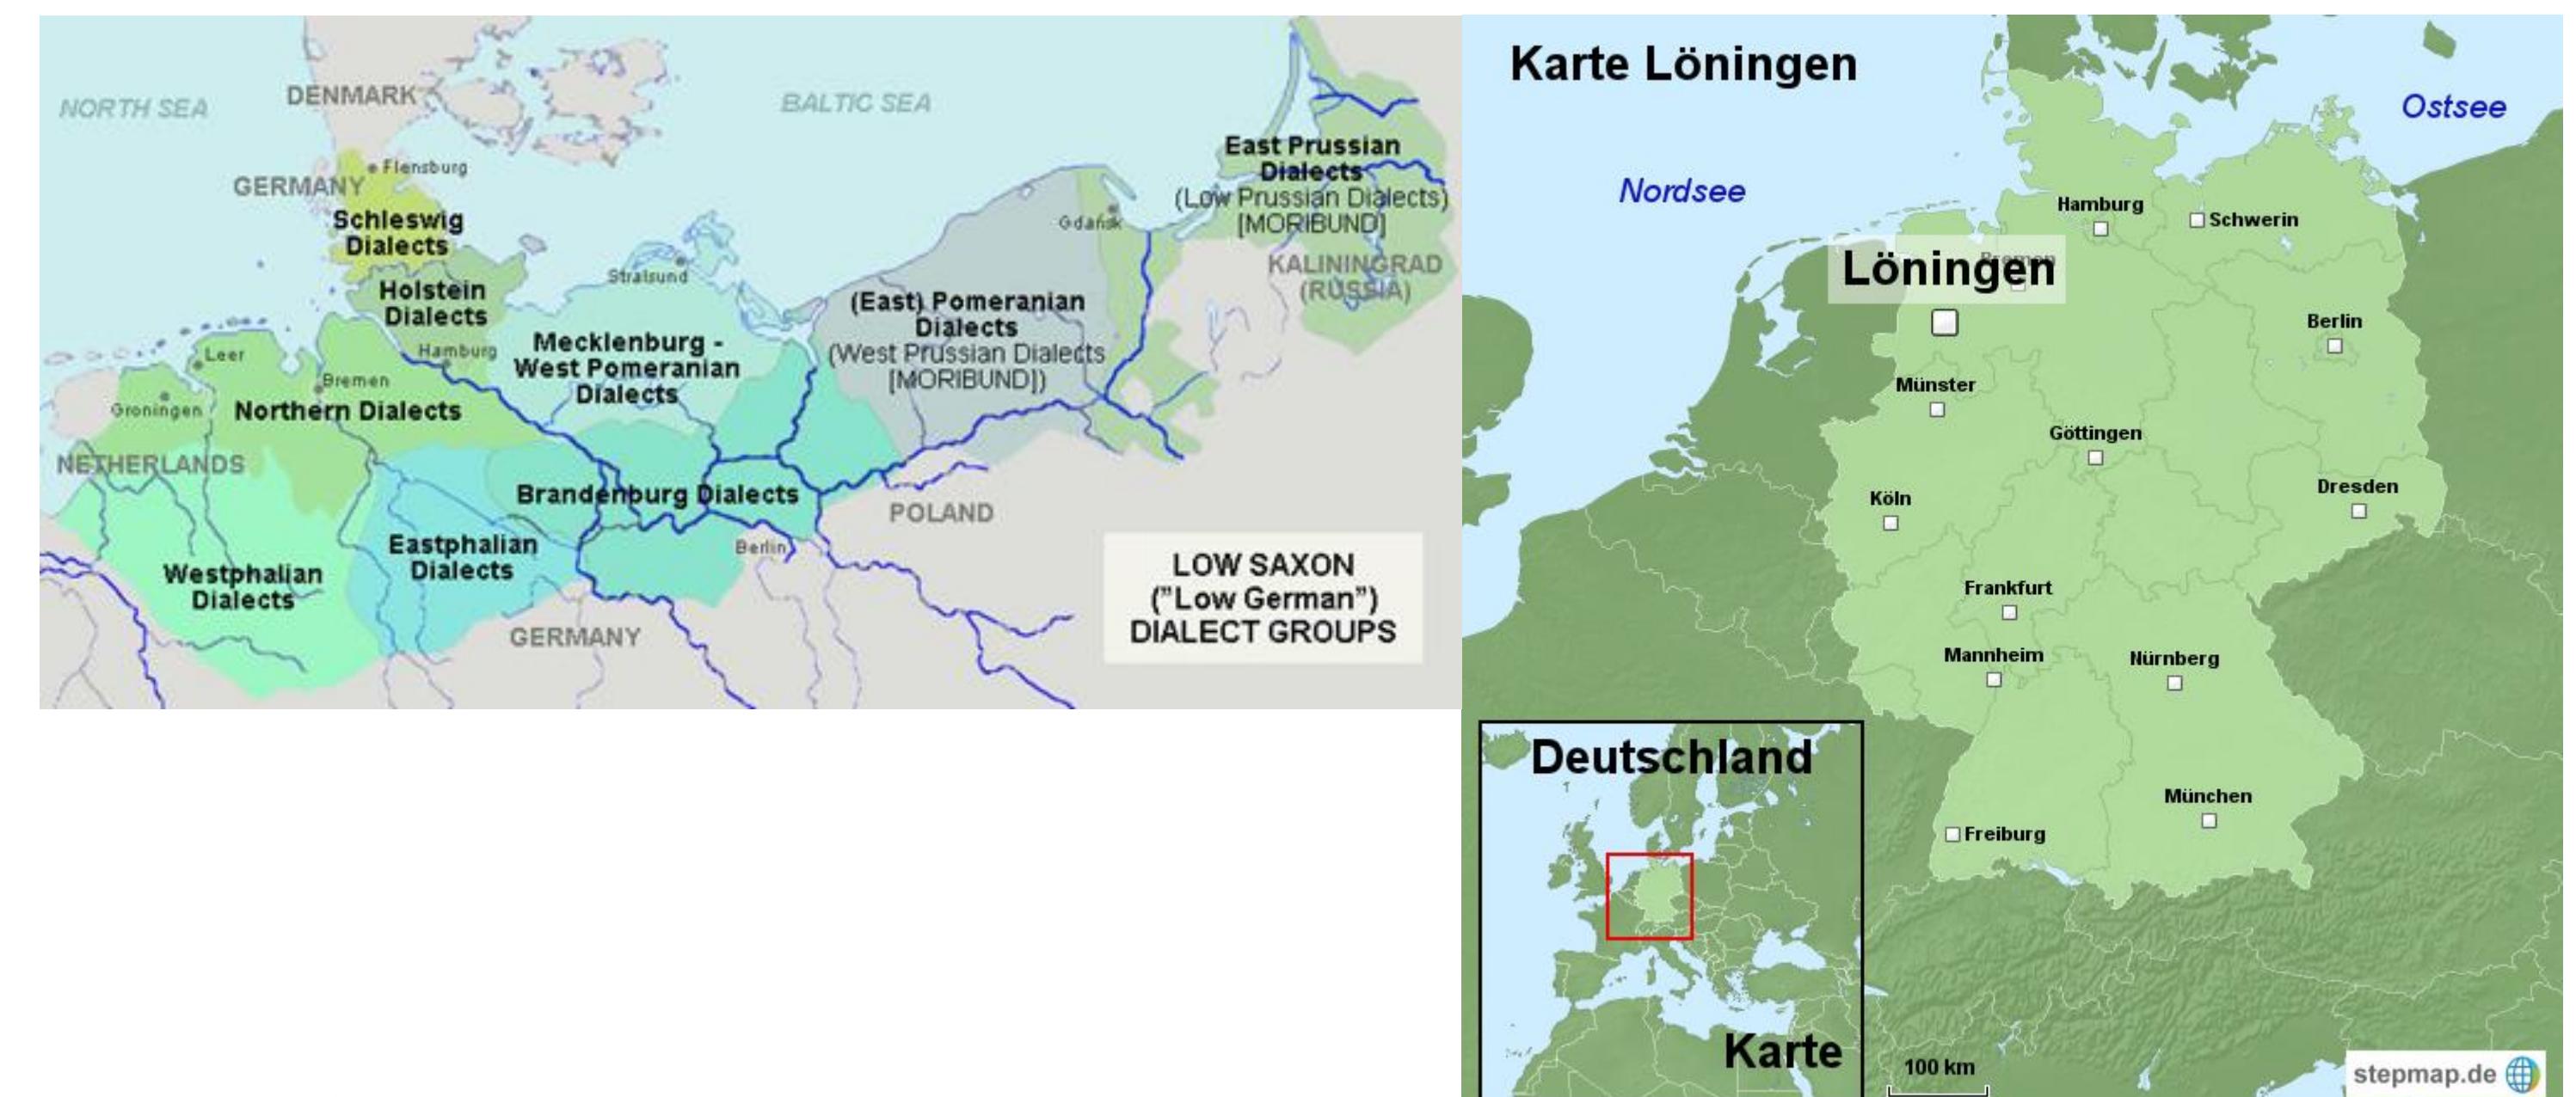

- 2-verb clusters with a V (participle) + auxiliary and with a V (infinitive) + modal.
→ HG: **1-2 orders more frequent with modal than perfective auxiliaries** (Dubenion-Smith 2010). Across WG: 1-2 orders more common with modal than with perfective auxiliaries (Wurmbrand 2017).
- 3-verb clusters consisting of a auxiliary + modal + V (infinitive)
→ **LG lacks ge-prefix, predicting different orderings in LG vs HG.**

Method

- Variant of the speeded grammaticality judgment task (Bader & Schmid 2009).
- Sentences presented auditorily, recorded with a native bilingual speaker.
- Participants had to judge (un)grammaticality of a sentence within 3 seconds.

Participants

- 18 speakers of the **Löningen dialect** (*Oldenburger Platt*/North Lower Saxon dialect)
- Age 43 – 83 years, 10 female, 8 male
- All spoke Low German from birth, age of onset High German ranged from 0-6.
- Except for 2 participants, no higher education

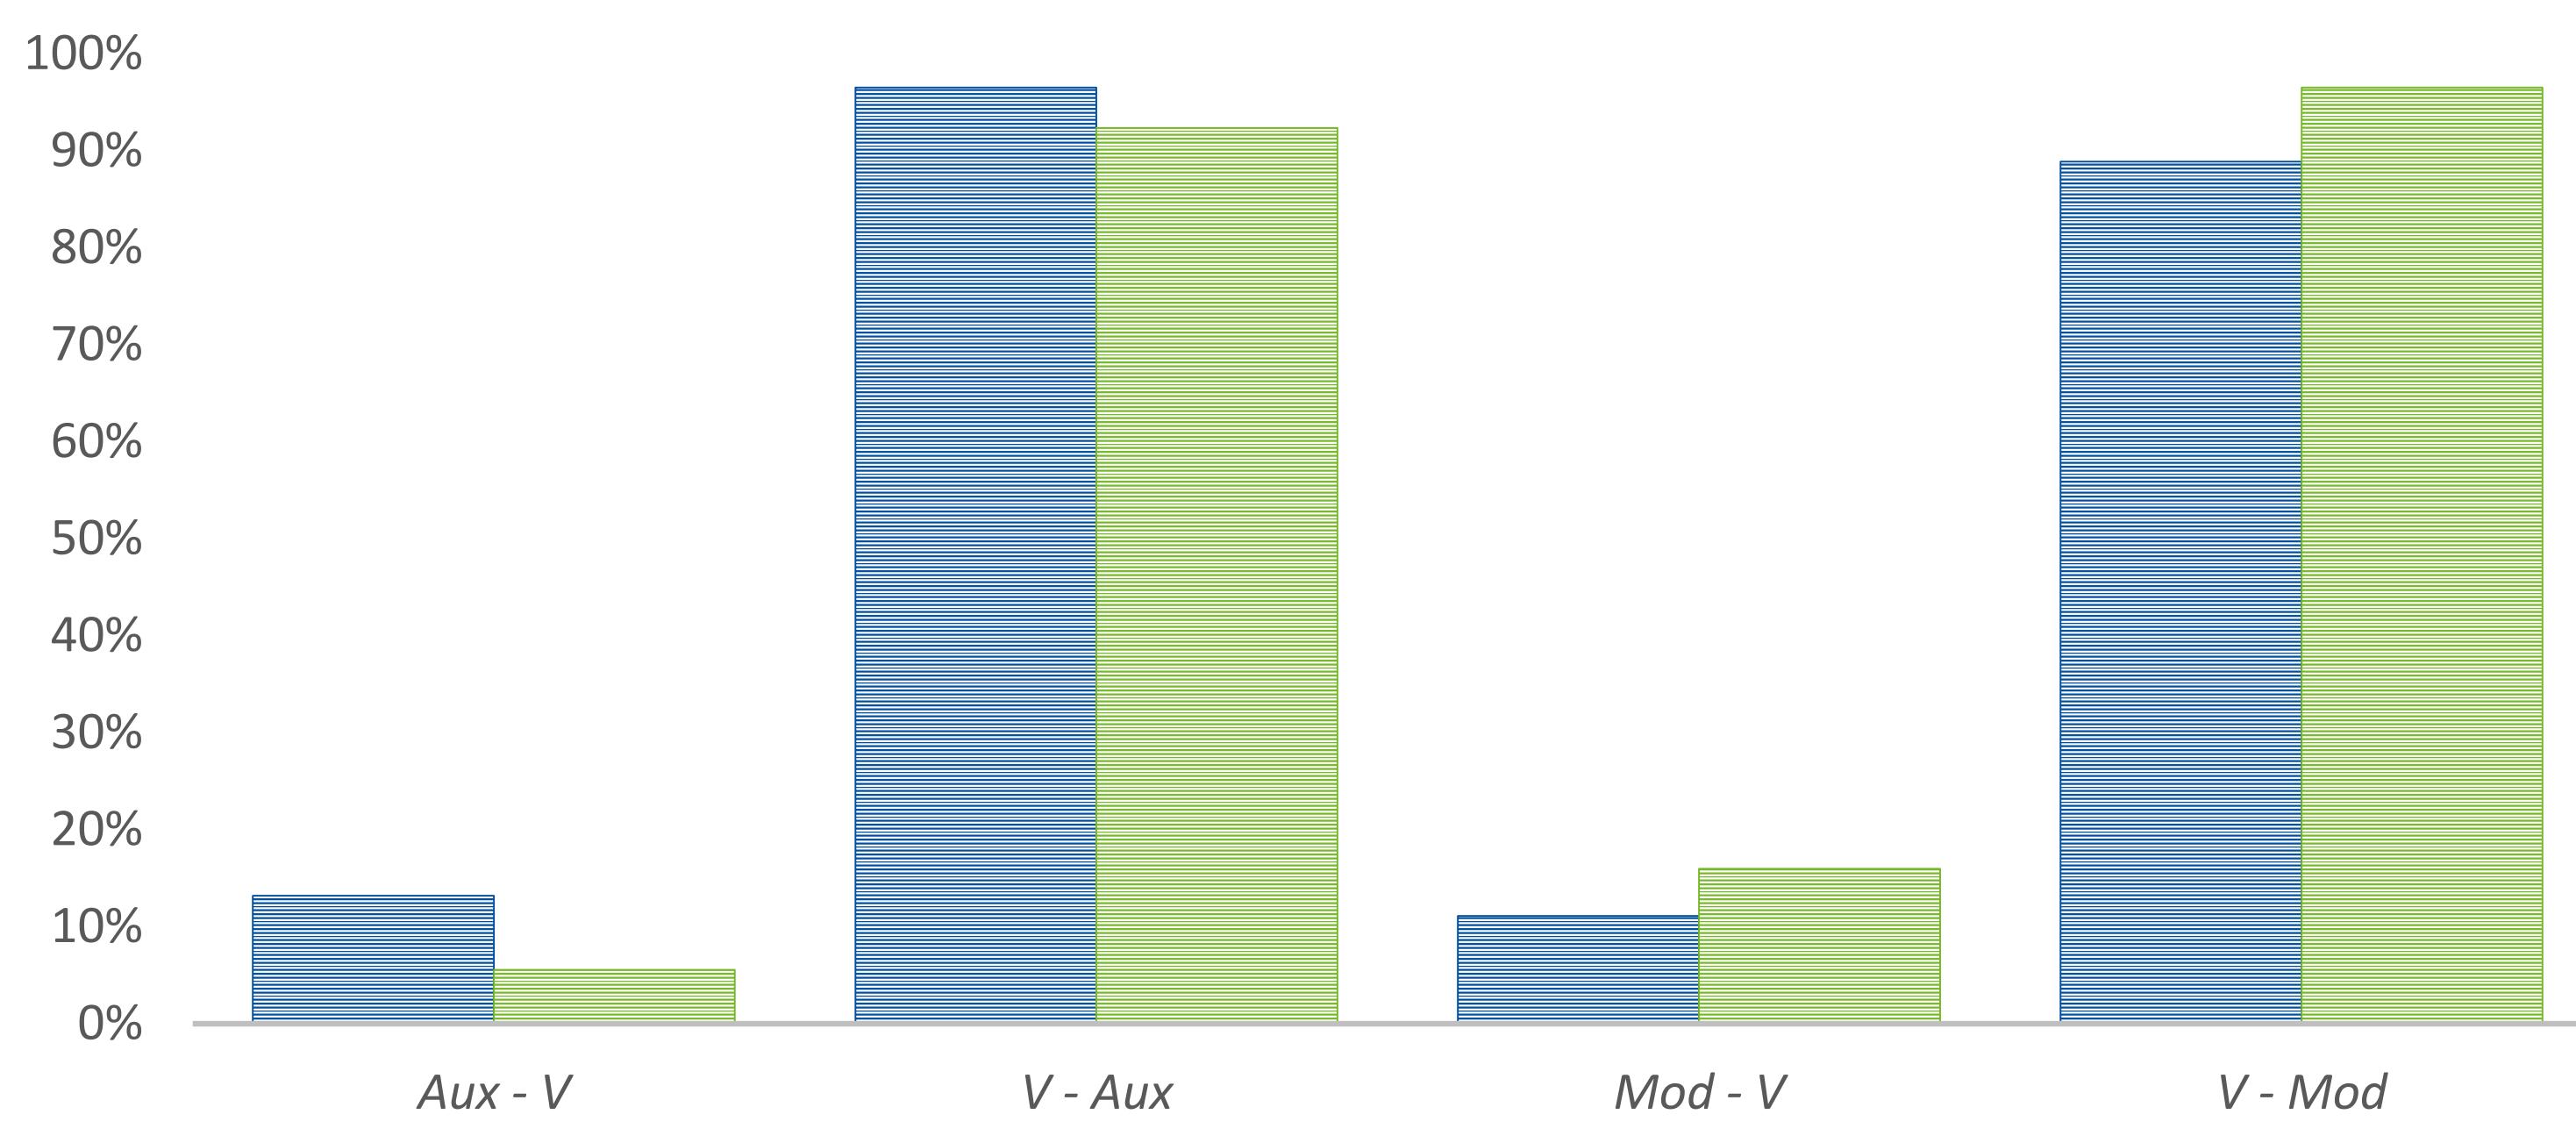

Materials

Condition	Example	Items
V – Aux 2 1	Hanna denkt, dass er die Socken gestrickt hat. Hanna thinks that he the socks knit has	8
Aux – V 1 2	Hanna denkt, dass er die Socken hat gestrickt. Hanna thinks that he the socks has knit	8
V – Mod 2 1	Hanna denkt, dass er die Socken stricken kann. Hanna thinks that he the socks knit can	8
Mod – V 1 2	Hanna denkt, dass er die Socken kann stricken. Hanna thinks that he the socks can knit	8
Aux – V – Mod 1 3 2	Peter denkt, dass sie die Pflanze hat gießen müssen. Peter thinks that she the plant has water must	8
Aux – Mod – V 1 2 3	Peter denkt, dass sie die Pflanze hat müssen gießen. Peter thinks that she the plant has must water	8
V – Aux – Mod 3 1 2	Peter denkt, dass sie die Pflanze gießen hat müssen. Peter thinks that she the plant water has must	8
V – Mod – Aux 3 2 1	Peter denkt, dass sie die Pflanze gießen müssen hat. Peter thinks that she the plant water must has	8

■ Low German ■ High German

Discussion

2-verb clusters:

- Both varieties: 2-1 orders preferred.
- 1-2 orders more acceptable with modals than with auxiliaries in High German.
- No evidence for transfer from one variety into the other.

3-verb clusters

- Different patterns: preferred Low German Verb₃-Mod₂-Aux₁ order virtually unacceptable in High German → absence of *ge*-prefix/IPP in Low German.
- Aux₁-Verb₃-Mod₂ orders preferred in High German (Bader & Schmid 2009, Wurmbrand 2004), but also 2nd best in Low German -> Transfer

3-verb clusters: complexity effect

- Lange (1981): Low German has a preference for using preterite instead of present perfect → reducing 3-verb cluster to 2 verbs:
... dass M. ein Buch hat lesen müssen → ... dass M ein Buch lesen musste
- This transfers to High German, open question what causes this.

IPP, absence of *ge*- and reordering

- For our speakers: Verb₃-Mod₂-Aux₁ orders not allowed in High German, contra Bader & Schmid (2009).
- Hypothesis: *ge*-prefix forces reordering.
- For non-dialect speakers of HG, this correlation between *ge*- and Verb₃-Mod₂-Aux₁ order is not transparent.
