Introduction

Table 1: Derivational morphology in verbs: prefixes

prefix	base	gloss	verb	gloss
ver-	A breed	'wide'	ver-breed-(en)	'widen'
	N vel	'skin'	ver-vell-(en)	'molt'
	V doe-n	'do'	ver-doe-(n)	'waste'
be-	A vuil	'dirty'	be-vuil-(en)	'dirty'
	N bos	'forest'	be-boss-(en)	'afforest'
	V giet-(en)	'pour'	be-giet-(en)	'water'
ont-	A hard	'hard'	ont-hard-(en)	'soften'
	N bos	'forest'	ont-boss-(en)	'deforest'
	V vriez-(en)	'freeze'	ont-vriez-(en)	'unfreeze'
P-	A slank	'slim'	af-slank-(en)	'slim'
	N burger	'citizen'	in-burger-(en)	'integrate'
	V gooi-(en)	'throw'	in-gooi-(en)	'throw in'

Introduction

- ▶ Dutch *ont*-verbs display semantic dissimilarity, but share the same prefix:

(1)	a.	ont-tron-(en) PFX-throne-INF 'dethrone'	c.	ont-hard-(en) PFX-hard-INF 'make not hard'
	b.	ont-boss-(en) PFX-forest-INF 'deforest'	d.	ont-brand-(en) PFX-fire-INF 'catch fire'

- ▶ Three interpretations: removal (1a-b), reversion (1c) and inception (1d)
- ▶ Puzzle: Multiple homophonous prefixes OR 1 portmanteau prefix?

Outline

Introduction

Uniformity of meaning

The structure of the prefix

Phrasal lexicalisation

Challenge of the structure

Roots

Three sample derivations

Conclusion

Uniformity of meaning

- ▶ Removal and reversion interpretations can be abstracted to motions of a Figure entity *away from* a Ground state or location (cf. Figure/Ground in Talmy 2000)

Uniformity of meaning

- (2) a. Het volk ont-troon-t de koning.
The people PFX-throne-PRES.3SG the king
'The king_F is removed **from** the throne_G' ABLATIVE
- b. Het bedrijf ont-bos-t het Amazonewoud.
The company PFX-forest-PRES.3SG the king
'The forest_F is removed **from** the Amazone_G' PRIVATIVE
- c. Het Gentse Milieufront ont-hard-t de voetpaden.
The Ghent Environmentfront PFX-hard-PRES.3SG the pavements
'The pavement changes **from** being hard_G (to being soft)' REVERSATIVE

Uniformity of meaning

- ▶ Inchoative interpretation (partially) corresponds to a motion *towards* the thing/property denoted by the root.

Uniformity of meaning

- (3) a. Hoofdtelefoon op batterijen ont-brand-t op vliegtuig.
Headphones on batteries PFX-fire-3.SG
'The headphones_F change (from being normal) **to** being
on fire_G' INCHOATIVE
- b. Het zaad ont-kiem-t.
The seed PFX-germ-3.SG
'The seed_F changes (from being a seed) **to** being a germ_G' INCHOATIVE

Uniformity of meaning

- ▶ Semantic dissimilarity can be explained away by semantics of directionality
- ▶ Directionality seems to emerge through prefixation (Baayen & Lieber 1993; Caha & Zíkova 2021; Gibert-Sotelo 2017)

Outline

Introduction

Uniformity of meaning

The structure of the prefix

Phrasal lexicalisation

Challenge of the structure

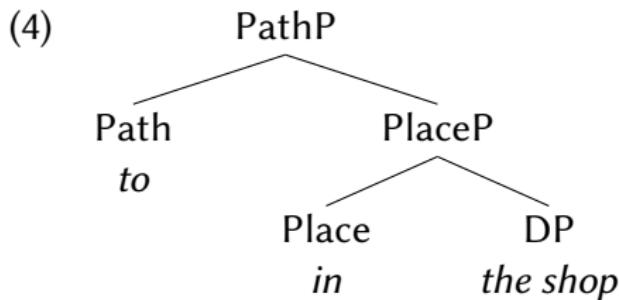

Roots

Three sample derivations

Conclusion

The structure of the prefix

- ▶ Generally, directional expressions have the structure in (4) (Jackendoff 1983; den Dikken 2010; Koopman 2000):

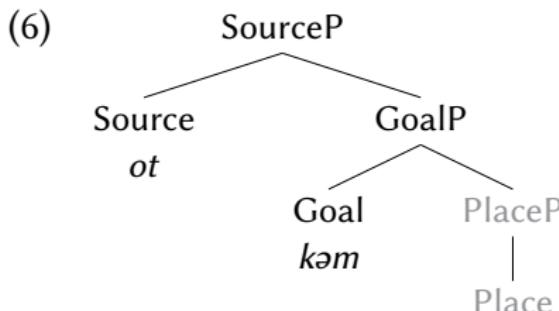

The structure of the prefix

- ▶ However, that is not fine-grained enough for morphologically complex markers, such as Bulgarian *ot-kem*

	Location	Goal	Source
(5)	Bulgarian	<i>pri</i>	<i>kem</i>

- ▶ Consequently, PathP has been decomposed (Pantcheva 2011):

The structure of the prefix

- ▶ For removal/reversion verbs: motion *away from* corresponds to a Source path

- ▶ Compositional semantics:
 - ▶ PLACE = set of points
 - ▶ GOAL = path with a condition imposed on the final point expressed by PLACE
 - ▶ SOURCE = path, reversion of GOAL path

The structure of the prefix

- ▶ Two more features (i):
 - ▶ RES (Ramchand 2008)

- (8) a. Zijn wangen kleurden **rood**
his cheeks coloured red
- b. *Zijn wangen **ont**-kleurden **bleek**
his cheeks de-coloured pale
- (9) a. Ze hechten zich **vast**
they attach themselves solid
- b. *Ze **ont**-hechten zich **los**
they detach themselves loose
- (10) a. Hij koppelt de treinen **vast**
He couples the trains solid
- b. *Hij **ont**-koppelt de treinen **los**
he unsaddles the horse off

The structure of the prefix

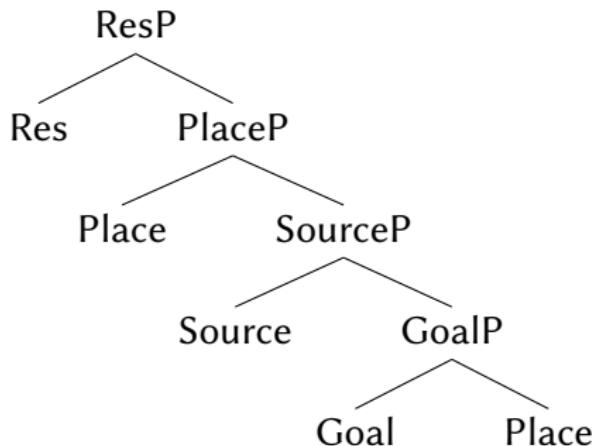

- ▶ Two more features (ii):
 - ▶ PLACE 2 (Svenonius 2010)

- (11) a. De goochelaar tovert het konijn **weg**.
‘The magician magics the rabbit away.’
 - b. De jongen is **weg**.
The boy is away.
- (12) a. S: Het volk onttroont de koning.
‘The people dethrone the king.’
 - b. Par: Het volk haalt de koning (**weg**) **van** de troon.
‘The king_F is being removed *away from* the throne_G’.

The structure of the prefix

- ▶ Final structure of *ont-*:

(13)

Outline

Introduction

Uniformity of meaning

The structure of the prefix

Phrasal lexicalisation

Challenge of the structure

Roots

Three sample derivations

Conclusion

Phrasal Lexicalisation

- ▶ Nanosyntax:
 - ▶ **EVERYTHING IS SYNTAX**

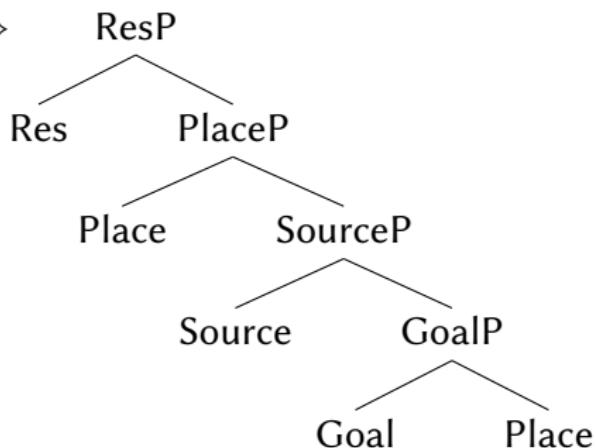

The atoms (terminal nodes) of syntactic trees are single features. All combinations of morphosyntactic features arise as the result of (binary) Merge. Pre-syntactic feature bundles do not exist, they correspond to phrases assembled by syntax (Caha 2020).
 - ▶ **PHRASAL LEXICALISATION**

Syncretic morphemes point towards spellout of multiple features. Lexicalisation applies at the level of the phrase, not the terminal.

Phrasal Lexicalisation

- ▶ Following this logic, the single morpheme *ont-* can spellout at the level of ResP, and lexicalise all features that are contained within:

(14) *ont-* \Leftrightarrow

Outline

Introduction

Uniformity of meaning

The structure of the prefix

Phrasal lexicalisation

Challenge of the structure

Roots

Three sample derivations

Conclusion

Challenge of the structure

- ▶ For inchoative verbs, the structure in (14) seems unsuitable.
The motion should be *towards* not a resultative *away from*.

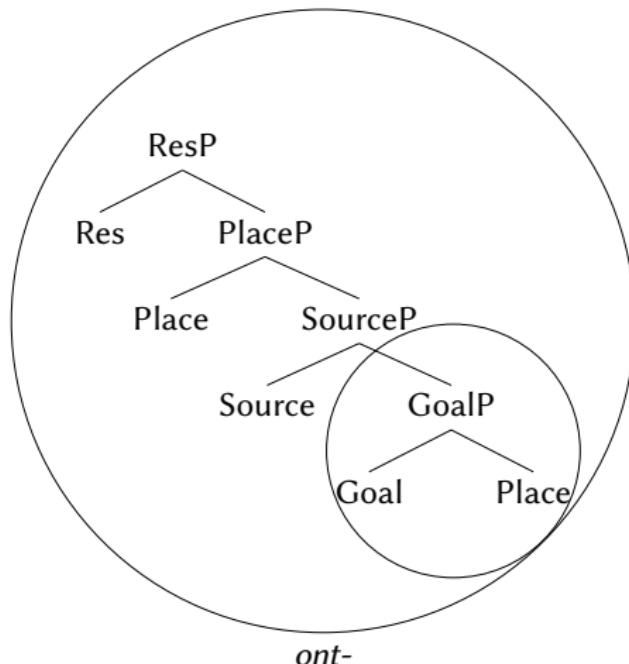

⇒ Possible solution:

- (15) *Superset Principle* (Starke 2009)
A lexically stored tree L matches a syntactic node S iff L contains the syntactic tree dominated by S as a subtree.

Challenge of the structure

- ▶ *Ont-* is able to spell out big structure, but also smaller parts:

(16)

Outline

Introduction

Uniformity of meaning

The structure of the prefix

Phrasal lexicalisation

Challenge of the structure

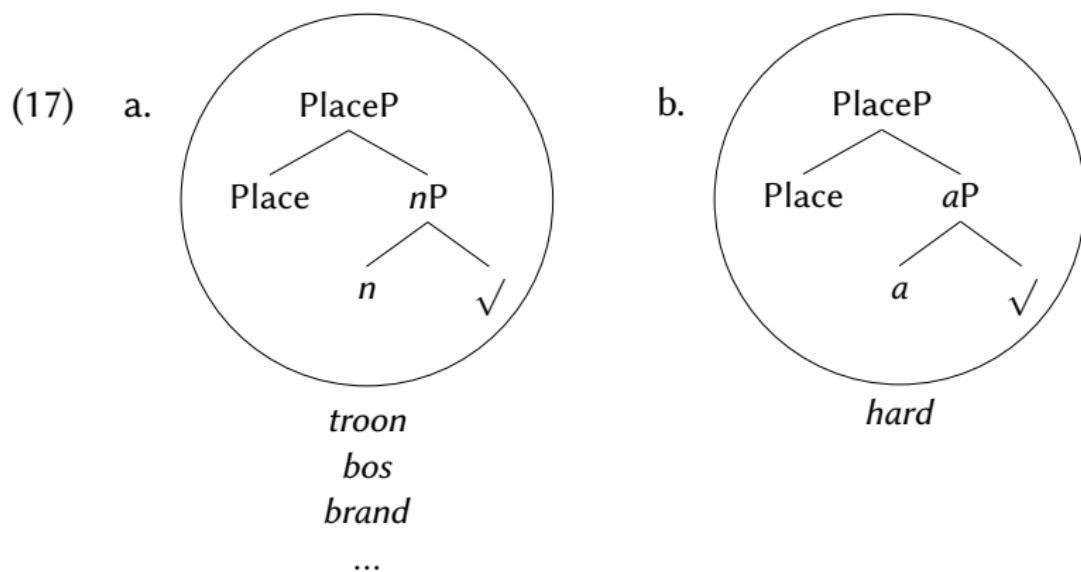

Roots

Three sample derivations

Conclusion

Roots

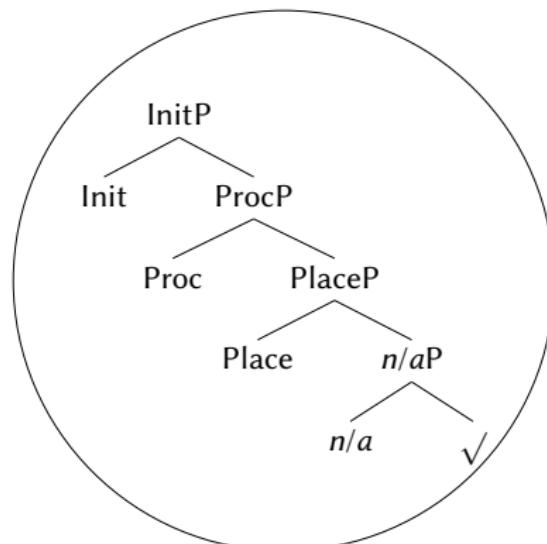

- ▶ Building on Fábregas (2022), who maintains locative structures for both the nominal and adjectival domain, I argue for the following roots in Dutch;
- ▶ In both domains, PLACE provides a set of points, a spatial region for nouns, and a region on a scale for adjectives

Roots

- ▶ Additionally, I argue, with Vanden Wyngaerd et al. (2022) that the structures are bigger for those roots that can verbalise by themselves. INIT and PROC are part of some roots (Ramchand 2008):

(18)

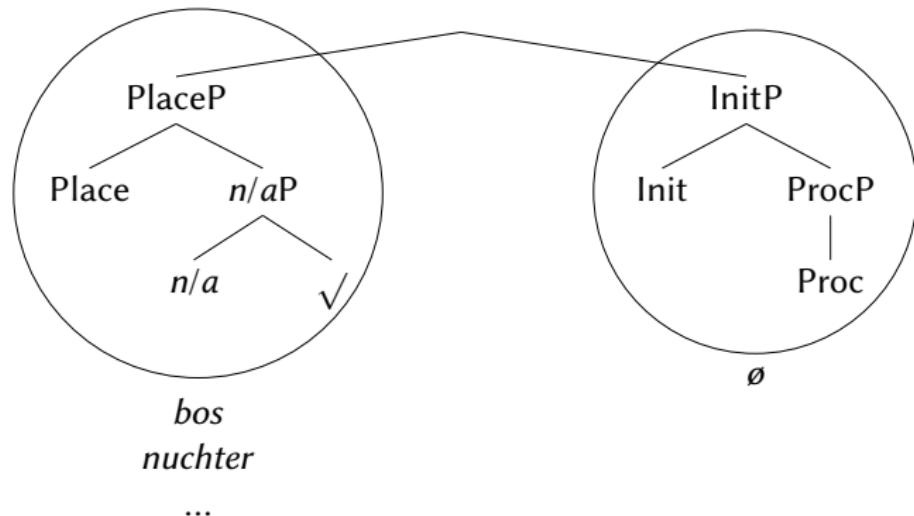

*troon
brand*

...

Roots

- ▶ For the ones that cannot verbalise on their own, I assume a zero verbaliser for now (Neeleman & Schipper 1993):

(19)

The structure of the prefix

Phrasal lexicalisation

Challenge of the structure

Roots

Three sample derivations

Conclusion

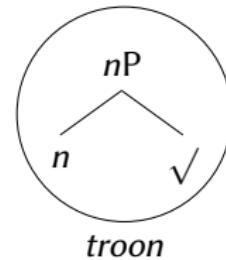

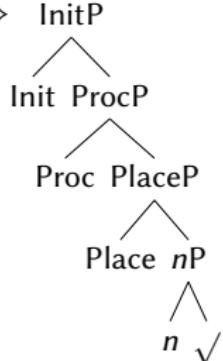

Three sample derivations

- ▶ REMOVAL/REVERSION + ‘INDEPENDENT’ VERBALISATION:
onttronen/ontharden
- ▶ REMOVAL/REVERSION + ZERO VERBALISER:
ontbossen
- ▶ INCEPTION:
ontbranden

Three sample derivations

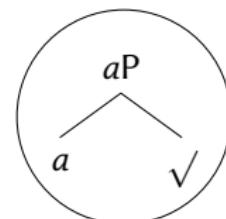

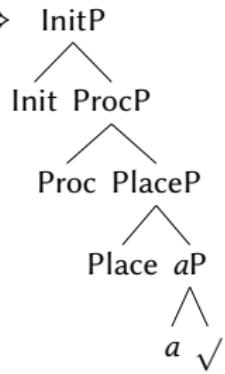

- ▶ LEXICALISATION ALGORITHM (Starke 2018)
 - a Merge F and spell out FP
 - b If (a) fails, move the spec of the complement of F and spell out FP
 - c If (b) fails, move the complement of F and spell out FP
 - d If (c) fails, backtrack to the previous cycle
 - e If (d) fails, spawn a new derivation

Outline

Introduction

Uniformity of meaning

The structure of the prefix

Phrasal lexicalisation

Challenge of the structure

Roots

Three sample derivations

Conclusion

Conclusion

- ▶ Form/meaning mismatch of derived *ont*-verbs can be explained away if:
 - ▶ it is assumed that *ont*-verbs denote either a motion away from or towards the root N/A, similar to directional expressions
 - ▶ this directional interpretation arises from the prefix which lexicalises both Source and Goal paths
