Carl von Ossietzky Universität Oldenburg

NEUROCOGNITIVE PSYCHOLOGY

DEPARTMENT OF PSYCHOLOGY
CARL VON OSSIETZKY UNIVERSITY OLDENBURG

Oldenburg, May 2025

Dear prospective student,

We are very pleased to inform you that we accepted you to our study programme Neurocognitive Psychology. As one of the very few psychology Master's programmes in Germany our course is entirely taught in English and international students are more than welcome.

If you decide to accept your place in our programme, you can expect:

- a comprehensive two-year programme in psychology and cognitive neuroscience with lots of hands-on research experience
- cutting-edge research topics such as multisensory integration, brain oscillations and behaviour, cortical plasticity, computational neuroscience, brain-machine interfacing, statistical modelling techniques, ambulatory assessment, and pharmaco-neuroimaging; many of those integrated in the Cluster of Excellence “Hearing4all”.
- state-of-the-art neuroscience and psychology labs (fMRI, (mobile) EEG, TBS, MEG, fNIRS)
- many elective modules, individual research projects and a long internship outside the university
- interdisciplinary backgrounds of teachers and students
- (intensive) German courses free of charge at the language centre of the University (credits can be used for the module Minor)
- academic writing and reading courses at the language centre (credits can be used for the module Minor)
- guidance through your studies by the programme coordinator

In addition to this letter we provide detailed information about our programme and the orientation week on our programme website www.uol.de/en/neurocogpsy. The information will be updated regularly. With this information, we would like to help you with your decision whether you want to study Neurocognitive Psychology in Oldenburg.

Lots of handy information regarding studying and living in Oldenburg can also be found on the following websites:
www.uol.de/en/students/ (all about studying at Oldenburg University)
https://uol.de/en/study-in-oldenburg (information for international students)
https://uol.de/orientierungswoche/ (schedule of the orientation week with events for all new students at the university)
https://uol.de/en/international-orientation (schedule of the international welcome week)
https://uol.de/en/campus-map/ (campus map)

Please save the following dates (details will follow):

Introductory Course Statistics (online/hybrid):	**September 26, October 2 & October 10**
Welcome week for international students:	**September 29 – October 2, 2025**
Orientation week for all students:	**October 6 – October 10, 2025**
Introduction to the Programme:	**October 8, 2025, 10:15h in A7 lecture hall**
Beginning of lectures:	**October 13, 2025**

Please feel free to contact us if you need further information or assistance: kerstin.bleichner@uol.de

We hope we can welcome you in Oldenburg in autumn.

Best regards

Dr. Kerstin Bleichner
Programme coordinator

Prof. Dr. Christoph Herrmann
Director of the Psychology Department

PLEASE NOTE:
Statistics and Programming

Our programme requires solid knowledge in statistics as you should have learned it in your Bachelor's studies. Please test your knowledge with our short test that we provide on our course website https://uol.de/en/psychology/master/course-overview. Make sure to catch up with any missing competencies before you start your studies with us in order to easily follow our Master's course.

We offer an **Introductory Course Statistics** in the beginning to help you catch up:
It will run in three sessions on
26 September (10:30-16:30h CET) online
2 October (9:00-13:00h CET) online
10 October (10:30-16:30h CET) online or in presence (room will be announced in Stud.IP)

Link to the sessions:
https://meeting.uol.de/rooms/kid-a8g-ml7-kff/join

Stud.IP course number: 6.02.001 Introductory Course Statistic
An additional weekly tutorial will be offered during the lecture period.

Students with a conditional acceptance letter for statistics have to take this course!
All others are invited to attend to prepare for a good start, too.

As a Research Master programme we will teach you various programming skills (Matlab, Python) that are essential for performing research in neurocognitve psychology. Those classes are mandatory and will make up, together with classes in advanced statistics, many of the studying hours in your first year.

Computation in Neuroscience (9 CP; lectures and seminars 4-6 h/week in the first year)
You will acquire scientific programming skills in MATLAB and the Python-based programme PsychPy.

Research Methods (total of 12 CP; lectures and seminars 4h/week in the first year)
These modules include multivariate statistical data analysis and programming in Python.

Many elective modules require programming and statistical knowledge from the modules mentioned above. Passing *Computation in Neuroscience* is a requirement for entering the research modules *Practical Project* and *Master's thesis*.

We expect students to be interested in learning programming and deepening their statistical knowledge.

Carl von Ossietzky Universität Oldenburg

NEUROCOGNITIVE PSYCHOLOGY

DEPARTMENT OF PSYCHOLOGY
CARL VON OSSIETZKY UNIVERSITY OLDENBURG

PLEASE NOTE:
Clinical (Neuro)Psychology

The Master's programme Neurocognitive Psychology is a research-oriented study programme. We do NOT focus on clinical psychology.

Many of our graduates work in clinics and rehabilitation centres as neuropsychologists. In Germany, they find these jobs without additional postgraduate qualifications if they speak German fluently (at least C1 level). If you intend to work in other countries, you need to inform yourself whether they have specific legal requirements to work as clinical neuropsychologist.

Importantly, in May 2021 it was decided that clinical neuropsychology (next to psychotherapy for adults and adolescents) will be included into the training for psychotherapists. This means that students, who want to work as clinical neuropsychologists in Germany in the future, will have to study a Master's degree with a focus in clinical psychology and psychotherapy that will end with a psychotherapeutical licence. They will afterwards follow a specialisation to become a certified clinical neuropsychologist. Our programme does not fulfill the requirements for a psychotherapeutical licence.
Currently, it is not known when and if clinical neuropsychology will become a legally protected profession which includes a professional specialisation for clinical neuropsychology building upon a Master's degree in clinical psychology. Thus, it is not clear whether our graduates will still be hired by clinics without a psychotherapeutical licence in the future.

The training as clinical Neuropsychologist offered by the Gesellschaft für Neuropsychologie (GNP) which provides professionalization to working neuropsychologists also without a psychotherapeutical licence will be offered until 2032. Professionals who follow this training are not allowed to work without formal supervision by a certified psychotherapist or medical doctor. They can also not balance accounts for their treatments with health insurance agencies.

The programme is not designed for training in clinical psychology. We offer only a few modules in clinical psychology and psychological diagnostics. Due to current (legal) developments in the field, it will be difficult to enter a postgraduate training to become a certified psychotherapist in several states in Germany even if you completed a Bachelor's degree in Psychology. Currently, the post-graduate training can only be started for sure in Lower Saxony. This training must be completed latest on September 1st, 2032.

Students, who started their Bachelor's degree in Psychology after September 1st, 2020, cannot start a postgraduate training in psychotherapy in Germany when completing our Master's programme!

German Language Courses / Academic English

You are welcome to attend language courses during the semester. The language centre offers a wide variety of language courses. All regular language courses are free for enrolled students. Feel free to improve your German language skills by attending German courses. Classes take place 6 hours a week. 9 credit points are given for active participation and passing the exam at the end of the semester. You can use credits from German classes for your module Minor. In order to find out your language level if you are not a total beginner, you must take a placement test offered at the beginning of the semester.
Our schedule will allow you to take part in the language courses that run Monday 8-12h and Friday 8-10h if you do not intend to do the elective module psy150 clinical psychology in your first term. You can take this lecture also in your 3. semester.

Moreover, intensive German language courses, comprising a total of 100 hours, take place in the semester breaks (September and March). This is a good way to learn German while you do not have to study for your other classes. Enrolment is mandatory.
To enrol and for more information, please visit the following website
https://uol.de/en/school3/language-centre/languages/german-as-a-foreign-language

Please note the German course registration times starting 1 September. You need to register early for beginners' courses, if you want to secure a place. Registration is possible even before you enrol formally with the university.

You can also take the English for University Studies: 5. Writing and Reading (pb337) course as your Minor module to support your studies in English.

CARL VON OSSIETZKY UNIVERSITY OLDENBURG

Handbook of modules

for the

Research Master programme

Neurocognitive Psychology

Date: May, 2025

Introduction:

The Handbook of modules lists all modules of the MSc programme *Neurocognitive Psychology*.

The research-oriented study programme lasts two years or four semesters during which a total of 120 CP must be achieved. It is composed of four parts. The general part contains five mandatory modules comprising 45 CP. The specialized part contains 10 modules from which students are free to choose at least three with a total of 24 CP. Two additional modules with a total of 12 CP ensure a recognition of a study period abroad. The programme further includes 12 CP for an external internship lasting 360 hours and 30 CP for completing the Master’s thesis with the accompanying Master’s colloquium. Another 9 CP must be acquired via a practical research project. The research components can be carried out in one of the Psychology labs at the University of Oldenburg or an external research group. The programme is designed in a modular fashion. The study structure offers increased flexibility to the students in the second half of their studies.

Please be aware that we strongly advise to attend at least one of the five modules psy170: Neurophysiology, psy270: fMRI Data Analysis, psy220: Human Computer Interaction, psy280: Transcranial Brain Stimulation, and psy290: Ambulatory Assessment in Psychology! Knowledge of either EEG, fMRI, or TBS data analysis, or knowledge of HCI or ambulatory assessment methods is essential for most practical projects and Master’s theses offered in the Department of Psychology.

Work with patients or experimental data acquisition with participants generally require a very good command of German! Non-mandatory classes from clinicians are (partly) given in German. You can take German courses as your Minor.

Overview:

The Master’s programme *Neurocognitive Psychology* has the following structure:

General part (mandatory):		**45 CP**
psy111 / psy112	Research methods I & II	2x 6 CP
psy125	Neuropsychological Diagnostics	6 CP
psy126	Test Theory and Test Construction	6 CP
psy130	Communication of scientific results	6 CP
psy141	Minor	6 CP
psy240	Computation in Neuroscience	9 CP
Specialized part (choose 24 CP; taking psy170, psy270, psy220, psy280 or psy290 is strongly recommended):		**24 CP**
psy150	Clinical Psychology (partly in German)	9 CP
psy170	Neurophysiology	6 CP
psy181	Neurocognition	6 CP
psy190	Sex and Cognition	6 CP
psy201	Neuropsychology	6 CP
psy210	Applied Cognitive Psychology	6 CP
psy220	Human Computer Interaction	6 CP
psy270	Functional MRI Data Analysis	9 CP
psy280	Transcranial Brain Stimulation	6 CP
psy285 / psy286	Study Abroad I / II - Psychology/Neuroscience	2x 6 CP[1]
psy290	Ambulatory Assessment in Psychology	6 CP
Practical part (mandatory):		**51 CP**
psy251	Internship or lab visit	12 CP
psy260	Practical project	9 CP[2]
mam	Master’s thesis (27 CP) and Master’s colloquium (3 CP)	30 CP
Total:		**120 CP**

[1] Achievements from a study abroad can be recognized in these modules if the achievements are from the field of psychology or neuroscience at Master’s level and the contents do not overlap with other elective or mandatory modules.

[2] Chose from Applied Neurocognitive Psychology, Biological Psychology, Psychological Methods and Statistics, Experimental Psychology, Neuropsychology, Ambulatory Assessment

Restriction in participant numbers apply for each elective module. There is no guarantee that students can take all modules of their choice.

Module structure Research Master Neurocognitive Psychology (winter term 2024)

NEUROCOGNITIVE PSYCHOLOGY

First semester

psy111
Research Methods I - Statistical Modeling - 1 & 2
6 CP

psy125
Neuropsychological Diagnostics - 1 & 2
6 CP

psy240 Computation in Neuroscience – 1 & 2, 3 CP

psy130
Communication of Scientific Results – 1 & 2[1]
6 CP

Choose from:
psy150 Clinical Psychology - 1, 6 CP
psy170 Neurophysiology - 1 & 2, 3 CP
psy201 Neuropsychology - 1, 3 CP

Admission Requirement or voluntary:
Introductory Course Statistics

21 CP compulsory, max. 12 CP elective

Second semester

psy112
Research Methods II - Statistical Learning - 1 & 2
6 CP

psy126
Test Theory and Test Construction - 1 & 2
6 CP

psy240
Computation in Neuroscience – 3, 4 & 5
6 CP

Continue:
psy150 Clinical Psychology - 2, 3 CP
psy170 Neurophysiology - 3, 3 CP
psy201 Neuropsychology - 2, 3 CP

Choose from:
psy210 Applied Cogn. Psych. - 1, 3 CP
psy220 HCI - 1 & 2, 6 CP
psy270 fMRI Data Analysis[2], 9 CP
psy280 TBS - 1 & 2, 6 CP
psy290 Ambulat. Assess. - 1 & 2, 6 CP

18 CP compulsory, max. 39 CP elective

Semester break

Mobility window for

psy251
Internship
12 CP

12 CP = 360h, may be split, e.g., 150h + 210h or 180h + 180h; At least 210h to be performed externally. Should be planned to start in the third week after the lecture period ends, in order to not collide with exams.

12 CP compulsory

Third semester

psy141
Minor[3]
6 CP *(or 2x 3CP)*

psy260
Practical Project[4]
9 CP

Continue:
psy150 Clinical Psychology - 1, 6 CP *(if not studied in 1st sem.)*
psy210 Applied Cognitive Psychology - 2, 3 CP

Choose from:
psy181 Neurocognition - 1, 3 CP
psy190 Sex and Cognition - 1 & 2, 6 CP

Optional mobility window to study abroad: Elective modules for recognition **psy285/psy286** Study Abroad - Psychology/Neuroscience, 2x 6 CP

15 CP compulsory, max. 18 CP elective

Fourth semester

mam
Master's Thesis and Colloquium
30 CP

Continue:
psy181 Neurocognition - 2, 3 CP

30 CP compulsory., max. 3 CP elective

General part: Compulsory modules, 45 CP in total
Practical part: Research modules & Internship, 51 CP in total
Specialized part: Electives & methods, choose 24 CP in total[5]

120 CP in four semesters

This plan is a suggestion how to arrange your modules. You are free to study the modules or parts of the modules earlier or later than suggested. You should aim to study 30 +/- 3 credit points per semester. 1 CP equals to 30 hours of work including preparation outside class.

1: psy130 part 2 can be taken during winter and/or summer term.
2: psy270 is blocked over 7 weeks in the first half of the term.
3: psy141: Choose Master classes of your interest, inside or outside the Department of Psychology. German or academic writing classes are possible.
4: psy260: Prior completion of psy240 required. Plan for a workload of ~20h/week for 3 months.
5: A combination of more than 24 CP would be reduced to 24 CP to calculate the grade. Choose at least 1 method course (highlighted in green).
For further information, check the module descriptions in the module handbook!

Learning outcomes and competencies Research Master Neurocognitive Psychology

Neurocognitive Psychology - Master's Programme

im Summer semester 2025

erstellt am 26/05/25

Mastermodule

psy111 - Research methods I - Statistical Modeling

Module label	Research methods I - Statistical Modeling
Modulkürzel	psy111
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Hildebrandt, Andrea (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	Goals of module: After completion of this module, students will have basic knowledge in managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They can apply the statistical methodology in terms of good scientific practice and interpret, evaluate and synthesize empirical results in basic and applied research contexts. Students will be aware of statistical misconceptions and they can overcome them. **Competencies:** ++ interdisciplinary kowledge & thinking ++ statistics & scientific programming ++ data presentation & discussion + independent research + scientific literature ++ ethics / good scientific practice / professional behavior ++ critical & analytical thinking ++ scientific communication skills + group work
Module contents	**Part 1: Multivariate statistical modeling** • Graphical representation of multivariate data • The Generalized Linear Modeling (GLM) framework • Multiple and moderated linear regression with quantitative and qualitative predictors • Logistic regression models • Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM) • Non-linear regression models (Polynomial regression, regression splines and local regression) • Path modeling • Factor analysis (exploratory & confirmatory) • Structural equation modeling (SEM; linear and non-linear) **Part 2: Multivariate statistical modeling with R (hands-on seminar)** • Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM
Literaturempfehlungen

Präsenzzeit Modul insgesamt				56 h

psy112 - Research methods II - Statistical Learning

Module label	Research methods II - Statistical Learning
Modulkürzel	psy112
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Hildebrandt, Andrea (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	Goals of module: Building upon the basic knowledge in multivariate statistical modeling covered in psy111, after completion of this module students will know how to deal with big data to address empirical questions in neurocognitive psychology. They will be able to solve prediction and classification problems to the realm of basic and applied statistical/machine learning purposes. Furthermore, students will understand the specifics of applied research and the statistical modeling of noisy, longitudinal data. **Competencies:** ++ interdisciplinary kowledge & thinking ++ statistics & scientific programming ++ data presentation & discussion + independent research + scientific literature ++ ethics / good scientific practice / professional behavior ++ critical & analytical thinking ++ scientific communication skills + group work
Module contents	**Part 1: Statistical / machine learning methods** • Supervised and unsupervised statistical learning and prediction • Resampling methods • Regularized regression • Linear and quadatic discriminant analysis • Naive Bayes algorithm • Tree-based methods • Support vector machines • The basics of neural networks • Principal component regression • Clustering methods **Part 2: Statistical / machine learning methods with R (voluntary hands-on seminar)** • Data examples and applications of the basic machine learning methods covered in the lecture **Part 3: Evaluation research (seminar with theory and practice)** • Paradigms and methods in applied evaluation research (quantitative, mixed-methods) • Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.) • Multivariate statistical modeling of change over time and group differences in change • Specific statistical tools for sampling and matching (e.g., Propensity score matching) • Basics of causality theory and the estimation of average and conditional

effects in EffectLiteR
- Research synthesis and meta-analysis

psy125 - Neuropsychological Diagnostics

Module label	Neuropsychological Diagnostics
Modulkürzel	psy125
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Roheger, Mandy (module responsibility) • Roheger, Mandy (Prüfungsberechtigt) • Hildebrandt, Andrea (Prüfungsberechtigt) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt) • Debener, Stefan (Prüfungsberechtigt) • Kiene, Franziska (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will acquire specific knowledge about (neuro-)psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. Students will learn how to analyze clinical cases (“case conceptualization”), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate information in order to draw conclusions about the case given specific diagnostic strategies. Finally, students will learn about the requirements of assessment report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module. **Competencies:** + Neuropsychological / neurophysiological knowledge for clinical assessments + interdisciplinary knowledge & thinking + ethics / good scientific practice / professional behavior + critical & analytical thinking
Module contents	**Part 1: Introduction to neuropsychological diagnostics (lecture): winter** • Psychological assessment as a decision process – descriptive and prescriptive models • Assessment methods, their construction and design, quality criteria • The logic of decision making in the assessment process • Classificatory decisions • Psychometrics to single cases • Examples of diagnostics processes in different clinical populations • Focus areas on different cognitive domains, their underlying models, respective possible impairments and possibilities for neuropsychological assessment • Reasoning for the applications of neuropsychological tests • Summarizing results and writing reports **Part 2: Applied Neuropsychological Diagnostics (seminar): winter** • Case conceptualization (neuropsychology and clinical psychology) • Formulating hypotheses • Selecting assessment procedures and planning administration • specific knowledge on neuropsychological testing • exercises in neuropsychological testing / practicing tests • Evaluating the application of assessment procedures • Analyzing, summarizing and visualizing results • Integrating results based on the decision rules • Writing a psychological/assessment report
Literaturempfehlungen	Will be specified in the courses.

psy126 - Test Theory and Test Construction

Module label	Test Theory and Test Construction
Modulkürzel	psy126
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Hildebrandt, Andrea (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt) • Zaggia, Leonardo (Prüfungsberechtigt) • Debener, Stefan (Module counselling)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	Goals of module: Students will acquire specific knowledge of modern test theory and test construction and will be trained to apply this knowledge in the context of test development and test adaptation. They will reflect on the differences between traditional and modern test theory and their use in the domain of applied psychometrics and the systematic design of interview and observation methods. Finally, students will learn about the requirements for writing test construction and/or adaptation reports. Ethical guidelines in psychometrics and quality standards will be implicit topics throughout the module. **Competencies:** + research methods and psychometric knowledge + interdisciplinary kowledge & thinking + ethics / good scientific practice / professional behavior + critical & analytical thinking
Module contents	**Part 1: Test Theory and Test Construction (lecture): summer** • Classical test theory • Generalizability theory • Latent-State and Trait theory • Latent variable models for different types of item responses • Measurement invariance across groups and time • Network modeling and machine learning in psychometrics • Preference modeling for constructing faking-resistant questionnaires and tests **Part 2: Test Analysis Applied (hands-on seminar): summer** • Test adaptation conceptualization • Test data processing • Item mining and analysis • Test analysis report writing
Literaturempfehlungen	Will be specified in the courses.

Module capacity	unlimited

Type of module	Pflicht / Mandatory
Module level	MM (Mastermodul / Master module)
Teaching/Learning method	Part 1: lecture; Part 2: seminar
Previous knowledge	You should know basic statistical concepts and multivariate statistics as they are covered in the introductory course statistics and in Research Methods I.

Examination	Prüfungszeiten	Type of examination
Final exam of module	Parts of the practical exam need to be completed and handed in at specific dates during the summer term.	The module will be tested by a portfolio: test adaptation report of 5 pages text + figures + script Required active participation for gaining credits: attendance of at least 70% in the seminar within one semester.

Form of instruction	Comment	SWS	Frequency	Workload of compulsory attendance
Lecture		2	SoSe	28
Seminar		2	SoSe	28
Präsenzzeit Modul insgesamt				56 h

psy130 - Communication of scientific results

Module label	Communication of scientific results
Modulkürzel	psy130
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Herrmann, Christoph Siegfried (module responsibility) • Herrmann, Christoph Siegfried (Prüfungsberechtigt) • Strüber, Daniel (Prüfungsberechtigt) • Mahadevan, Rachana (Prüfungsberechtigt) • Park, Seonghun (Prüfungsberechtigt) • Strüber, Daniel (Module counselling)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will acquire specific knowledge about the presentation of scientific results both orally and in writing. Students will learn modern techniques for presentation, literature research and writing skills. They will also be taught about arguing scientifically. **Competencies:** ++ data presentation & discussion ++ scientific literature ++ scientific English / writing ++ scientific communication skills + group work
Module contents	**Part 1: Communication of scientific results (seminar)** Literature search Presentation skills Writing skills **Part 2: Psychological colloquium** Experienced scientists from various psychological disciplines will be giving talks about their experimental results. Speakers will be invited also from other universities. Students are encouraged to discuss the results with the experts and to make suggestions on whom to invite
Literaturempfehlungen	- Sternberg, Robert (2000) Guide to Publishing in Psychology Journals, Cambridge University Press

Colloquium		2	SoSe und WiSe	28
Präsenzzeit Modul insgesamt				56 h

psy141 - Minor

Module label	Minor
Modulkürzel	psy141
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Rieger, Jochem (Module counselling) • Bleichner, Kerstin (Module counselling) • Rieger, Jochem (Prüfungsberechtigt) • Gießing, Carsten (Prüfungsberechtigt) • Puschmann, Sebastian (Prüfungsberechtigt) • Maier, Esther Christine (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile. Students may also broaden their psychological knowledge or language skills. **Competencies:**
Module contents	To complement the core of the study programme in a meaningful way, students can take Master modules and courses from the fields • Biology • Neurosciences • Computer Science • Physics • Mathematics • Pedagogy • Philosophy • related fields • Psychology (additional elective module (NOT psy170, psy220, psy270, psy280, psy290) or from another study programme) Students whose first language is not German, may take German classes. Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis). Students can take the academic writing course ‘English for University Studies: 5. Writing and Reading pb337’ from the language center. Other English classes cannot be taken as Minor. A list of already approved courses/modules can be found on our website. You can take other courses/modules if they fulfil the following requirements: • Master level (other than language courses) • may be ungraded, but need proof of competence (e.g. a pass/fail exam) Note that Minor courses/modules must not repeat contents of mandatory modules or taken elective modules of the programme. **We recommend taking modules/courses that strengthen your own professional profile.**
Literaturempfehlungen	
Links	List of approved courses/modules and approval form: https://uol.de/en/psychology/master/course-overview/ -> Supporting documents

Languages of instruction	English , German
Duration (semesters)	1 Semester
Module frequency	irregular
Module capacity	unlimited
Reference text	PLEASE NOTE: If you want to take a module/course which is not listed in the list of approved courses/modules, please check thoroughly whether the course/module fulfils the requirements listed under 'module contents' before you start the course/module. The requirements for the minor module are also described in the subject specific amendments to the general examination regulations (fachspez. Anlage). In cases of doubt, the programme coordinator can advise you. Recognition procedure: • Certificates of completion of approved courses/modules (see list of approved courses) have to be sent directly to the examinations office. • Certificates of completion for courses/modules without former approval have to be sent to the head of the examinations committee together with the approval form and a course/module description. If you want to take an additional elective module for your Minor (taking only a part of an elective module is not possible), you need to inform the contact person for the respective module in writing BEFORE the start of the module. If your request is NOT rejected in written form within 4 weeks, the module counts as approved for the Minor and the course credits will be automatically entered for your Minor. You will receive a pass/fail for this module. You CANNOT use it afterwards as a normal elective module. You can also NOT rededicate an elective that you have already started as your Minor. Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module. It is your responsibility to ask the teacher whether you can take part in a course/module. **Please be aware that you can only use 6 credits for the module psy141 Minor. If you take more Minor courses/modules, these credits cannot be used for your degree. You can still ask the teacher to sign an attendance certificate (download https://uol.de/en/psychology/master/course-overview) or module examination form (https://uol.de/en/course-of-study/exams/neurocognitive-psychology-master-545) which is sufficient for later applications to prove that you took the additional course/module.**
Type of module	Pflicht / Mandatory
Module level	MM (Mastermodul / Master module)
Teaching/Learning method	Lectures and seminars (depends on the chosen modules)

Examination	Prüfungszeiten	Type of examination
Final exam of module		If grades are earned in the minor, those are counted as pass/fail. Certificates for grades can be separately requested from the examination office.

Frequency	SoSe oder WiSe
Workload Präsenzzeit	56 h

psy150 - Clinical Psychology

Module label	Clinical Psychology
Modulkürzel	psy150
Credit points	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Thiel, Christiane Margarete (module responsibility) • Thiel, Christiane Margarete (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of the Module:** Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the medical guidelines and evidence-based practice. **Competencies:** ++ Neuropsychological / neurophysiological knowledge + experimental methods + data presentation & discussion + scientific literature + critical & analytical thinking + knowledge transfer + group work
Module contents	The first part of the module provides students with a theoretical and practical background on neurobiological and neurochemical bases of psychiatric disorders and pharmacological interventions. This will be complemented by psychiatric interviews in simulated patients focussing on psychopathological assessment. In the second part, the students will learn to plan and assess the effectiveness of psychological interventions for selected disorders. **Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention** **(lecture and seminar): winter** Basics of neurotransmitter systems and psychopharmacology Substance Abuse (e.g. psychostimulants, hallucinogenics) Depression Anxiety Disorders Alzheimer's Disease Schizophrenia psychopathological assessment The seminar (voluntary) will be given in German as clinicians and patient actors are involved. **Part 2: Psychological interventions within the framework of evidence-based medicine** **(3 seminars to chose from, one partly in German): summer** The seminars focus on concepts of evidence based treatment: - with application to acquired dysfunctions of the brain (2.1) - to selected psychiatric disorders (2.2) - with application to trauma- and stress-related psychiatric disorders. Special emphasis is placed on children and adolescents (2.3) Options: 1. Students attend both parts 2.1 and 2.2 2. Students attend the first four classes of 2.1 in addition to part 2.3

	For summer term 2025, the seminars will most likely be restructured.

psy170 - Neurophysiology

Module label	Neurophysiology
Modulkürzel	psy170
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Debener, Stefan (module responsibility) • Debener, Stefan (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will understand the basic concepts of biomedical signal processing. They will use EEG analysis tools interactively and independently and will understand the complete chain of EEG analysis steps, from data import to the illustration of results. They will be able to use open source tools for EEG analysis and apply theoretical knowledge to practical problems of physiology. **Competencies:** ++ Neuropsychological / neurophysiological knowledge ++ experimental methods ++ statistics & scientific programming ++ ethics / good scientific practice / professional behavior + group work + project & time management
Module contents	Students will acquire specific knowledge about neurophysiology and neuroanatomy, learn the fundamental concepts of multi-channel EEG analysis, and acquire hands-on skills in recording EEG data and using EEGLAB, an open-source software toolbox for advanced EEG analysis. **Part 1: Neurophysiology and neuroanatomy (lecture): winter** Neurophysiology, EEG, EMG, ECG Neuroanatomy Time-domain and frequency-domain analysis methods **Part 2: EEG recording and analysis (hands-on seminar): winter** In small groups under supervision of the lecturer, all students will record EEG data of their fellow students and will serve as participants for their classmates. We cannot guarantee same-gender groups. Recording and analysis of biomedical signals Averaging, filtering, signal-to-noise Topographical EEG analysis **Part 3: EEG analysis with Matlab (hands-on seminar): summer** EEGLAB file I/O, data structure and scripting Preprocessing, artefact rejection and artefact correction Statistical decomposition Event-related potentials, topographical mapping and power spectra Illustration of results Literatur

Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Thiel, Christiane Margarete (module responsibility) • Thiel, Christiane Margarete (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students should be able to recognize and critically evaluate the value of considering neuroscience in the study of psychological topics. **Competencies:** ++ neuropsychological / neurophysiological knowledge ++ interdisciplinary kowledge & thinking ++ data presentation & discussion ++ scientific literature + scientific communication skills + group work
Module contents	Students will first acquire a general understanding of the brain mechanisms of different cognitive functions and the methods used to study these functions. They will then apply this knowledge by discussing current research topics (part 1). Knowledge will be transferred to the relation between the development of the human brain and the cognitive processes it supports (part 2). **Part 1: Introduction to cognitive neuroscience (lecture and seminar): winter** Brain and cognition, methods of cognitive neuroscience Attention, learning and memory Emotional and social behaviour Language, executive functions **Part 2: Neurocognitive development (seminar): summer** Brain development and cortical plasticity Effects of early-life stress on brain development Development of object recognition, social cognition, memory, and executive functions

psy190 - Sex and Cognition

Module label	Sex and Cognition
Modulkürzel	psy190
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Strüber, Daniel (module responsibility) • Strüber, Daniel (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.
Skills to be acquired in this module	**Goals of module:** Students will acquire specific knowledge about sex differences in cognitive abilities and social behaviours. They will be able to understand the interrelated impact of social and biological influences on the brain's control of the (sex-specific) behaviours. Students should be able to critically evaluate behavioural sex differences from different perspectives and to reflect on possible implications for society. **Competencies:** ++ neuropsychological / neurophysiological knowledge + interdisciplinary kowledge & thinking ++ data presentation & discussion ++ scientific literature + critical & analytical thinking ++ scientific communication skills + group work + project & time management
Module contents	Inhalte **Part 1: Introduction to the study of sex differences (lecture): winter** The measurement of sex differences Sex differences in emotion Sex differences in aggression Sex differences in cognitive abilities Hormones, sexual differentiation, and gender identity Sex hormones and play preferences Sex differences in hemispheric organization Brain size and intelligence **Part 2: Sex, brain, and behaviour (seminar): winter** Sex differences in empathy The extreme male brain theory of autism (S. Baron-Cohen) Sex differences in neuropsychiatric disorders Sex differences in stress response Social implications of sex differences

psy210 - Applied Cognitive Psychology

Module label	Applied Cognitive Psychology
Modulkürzel	psy210
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Rieger, Jochem (module responsibility) • Rieger, Jochem (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.
Skills to be acquired in this module	**Goals of the module:** Students will gain an overview of theories of (Neuro)Cognitive Psychology with potential for application. On completion of this module students should have a repertoire of cognitive psychology concepts relevant for real world situations, be able to transfer the learned theoretical concepts into practical contexts and evaluate potential issues arising in the process of translation. **Competencies:** ++ Neuropsychological / neurophysiological knowledge + interdisciplinary kowledge & thinking + experimental methods + scientific literature + ethics / good scientific practice / professional behavior + critical & analytical thinking + scientific communication skills + knowledge transfer
Module contents	The module will cover core concepts of cognitive psychology, their neuronal basis, basic knowledge of neuroimaging and data analysis techniques. Special emphasis will be put on research aiming at complex real-world settings and translation of basic science in to practice. Examples of successful transfers will be analyzed. The lecture provides the theoretical basis. In the seminar the material is consolidated by examples from the literature which will be presented, critically analyzed and discussed. **Part 1: (Neuro)Cognitive Psychology in the wild I (lecture): summer** • Neurocognitive Psychology with emphasis in real world context • Methodological considerations: Generalization, validity of theories and research methods • Information uptake and representation: Sensation, perception, categorization • Selection of information and capacity: Attention and memory enhancement and failure • Generation and communication: Language, reading, dyslexia • Pursuing goals: Thinking, problem solving and acting **Part 2: (Neuro)Cognitive Psychology in the wild II (seminar): winter** In the accompanying seminar we will work through recent examples in the literature for topics of the lecture. The goal is to apply novel knowledge from the lecture to understand and critically discuss actual research approaches.

psy220 - Human Computer Interaction

Module label	Human Computer Interaction
Modulkürzel	psy220
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Rieger, Jochem (module responsibility) • Rieger, Jochem (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology or other programs related to the field (e.g. neuroscience, computer science, physics etc.).
Skills to be acquired in this module	**Goals of module:** The goal of the module is to provide students with basic skills required to plan, implement and evaluate brain computer interfaces as devices for human computer interaction. BCIs are an ideal showcase as they fully span the interdisciplinary field of HCI design, implementation and evaluation. Importantly, classical BCI-methods can be used for modern data-driven basic neuroscience. The module is designed as an "enabler course", meaning that ideally students should be able to understand and start independent studies into the BCI-methods. Therefore, it goes into depth instead of breadth. Good programming skills and some active knowledge of high school maths is strongly advised to maximize the learning outcome. **Competencies:** ++ understanding of the foundations of statistical learning techniques + basics to understand technical time series processing and machine learning papers ++ interdisciplinary knowledge & thinking + experimental methods ++ statistics & scientific programming + critical & analytical thinking + scientific communication skills + knowledge transfer + group work + project & time management
Module contents	The module will introduce classic BCI paradigms and brain recoding techniques. However the main focus will be on a deeper understanding of the most important signal processing, machine learning, and performance evaluation techniques. The module combines a lecture on the theoretical foundations a seminar/hands on course in which students learn to implement the BCI-processing steps on real neurophysiological data and further elaborate specific subtopics. **Part 1: HCI and BCI Lecture: (Lecture on methodological foundations of BCI): summer** **Part 2: Hands on BCI implementation (practical seminar): summer** Topics covered: • A brief history of BCIs and examples of HCI control and basic neuroscience using BCI • techniques. • Data preprocessing (e.g. filtering, projection techniques) and common artifacts and • artifact treatment)

- Feature generation (e.g. fourier transform, spectral estimation techniques, principle
- components)
- Machine learning for classification and regression (e.g. model parameter optimization in
- multivariate regression)
- Evaluation (e.g. measures of model quality, cross validation to test model generalization,
- permutation tests)

Where possible the lecture provides mathematical backgrounds of the data analysis techniques.
The practical seminar implements BCI techniques on a real data set and further elaborates
specific topics in seminar form.

Duration (semesters)	2 Semester
Module frequency	The module will start every winter term.
Module capacity	unlimited
Reference text	Important note: Passing the exam of psy240 is mandatory for starting a Practical Project (psy260) and the Master's thesis.
Type of module	Pflicht / Mandatory
Module level	MM (Mastermodul / Master module)
Teaching/Learning method	Part 1 and 2: lectures; Part 3 and 4: excercises; Part 5: seminar; additional tutorials

Examination	Prüfungszeiten	Type of examination
Final exam of module	exam period at the end of the summer term	In a 120-minute written exam the participants will have to program MATLAB-scripts for a selection of neuroscientific data-analysis problems, demonstrating their skills in the different topics. The scripts and comments will be written on university-provided laptops and handed in via email or USB-drive. Students need to hand in 1-2 programming tasks in the exercises to be allowed to take part in the exam. Required active participation for gaining credits: script for the presentation of experimental stimuli in part 5 attendance of at least 70% in the seminar 'computer-controlled experimentation', part 5 within one semester (will be checked in StudIP).

Form of instruction	Comment	SWS	Frequency	Workload of compulsory attendance
Lecture	2h/week in winter and summer term	4	SoSe und WiSe	56
Seminar		2	SoSe	28
Exercises	1h/week in winter and summer term	2	SoSe und WiSe	28
Tutorial	voluntary		SoSe und WiSe	0
Präsenzzeit Modul insgesamt				112 h

psy251 - Internship

Module label	Internship
Modulkürzel	psy251
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Kranczioch-Debener, Cornelia (module responsibility) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will obtain direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work. **Competencies:** ++ expert neuropsychological/neurophysiological knowledge + interdisciplinary knowledge & thinking + experimental methods ++ ethics / good scientific practice / professional behavior ++ knowledge transfer + project & time management
Module contents	The students will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.
Literaturempfehlungen	
Links	Information on internships and necessary forms: https://uol.de/en/psychology/master/course-overview/
Languages of instruction	English , German
Duration (semesters)	1 Semester
Module frequency	irregular
Module capacity	unlimited
Reference text	The internship lasts 360 hours (9-10 weeks). It can be performed at 2 different institutions with a minimum duration of 150 hours (4 weeks) for each part. A part of your internship (maximally 150 hours) can be performed internally in the Department of Psychology. Internal internships cannot be performed in the same lab in which you will perform / have performed your Practical Project psy260! Your supervisor must be a psychologist. If your supervisor is NOT a

	psychologist, please contact us for approval BEFORE you start your internship. Please note that details are regulated in the exam regulations. A blank internship certificate and the report form can be found on the programme website. To generate ideas, a folder with information on internships that other students have performed is available in the office of Dr. Cornelia Kranczioch.
Type of module	Pflicht / Mandatory
Module level	MM (Mastermodul / Master module)
Teaching/Learning method	internship at (external) institution

Examination	Prüfungszeiten	Type of examination
Final exam of module		
	Individual; 2-3 possibilities per semester to present the internship to other students	The students have to hand in a written report (2-3 pages) and give a short presentation about their internship. They have to show a certificate from the institution at which they performed the internship. The internship is evaluated as pass/fail.

Form of instruction	Practical training
SWS	0
Frequency	SoSe oder WiSe

psy260 - Practical project

Module label	Practical project
Modulkürzel	psy260
Credit points	9.0 KP
Workload	270 h (attendance in the lab and accompanying seminars as necessary for your project (~ 200h))
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Debener, Stefan (module responsibility) • Herrmann, Christoph Siegfried (module responsibility) • Hildebrandt, Andrea (module responsibility) • Puschmann, Sebastian (module responsibility) • Rieger, Jochem (module responsibility) • Roheger, Mandy (module responsibility) • Bleichner, Martin Georg (Prüfungsberechtigt) • Hellmann, Andreas (Prüfungsberechtigt) • Al-Zubaidi, Arkan (Prüfungsberechtigt) • Debener, Stefan (Prüfungsberechtigt) • Gießing, Carsten (Prüfungsberechtigt) • Herrmann, Christoph Siegfried (Prüfungsberechtigt) • Hildebrandt, Andrea (Prüfungsberechtigt) • Hildebrandt, Helmut (Prüfungsberechtigt) • Rieger, Jochem (Prüfungsberechtigt) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt) • Özyurt, Jale Nur (Prüfungsberechtigt) • Stecher, Heiko (Prüfungsberechtigt) • Strüber, Daniel (Prüfungsberechtigt) • Thiel, Christiane Margarete (Prüfungsberechtigt) • Rosemann, Stephanie (Prüfungsberechtigt) • Puschmann, Sebastian (Prüfungsberechtigt) • Roheger, Mandy (Prüfungsberechtigt) • Jäger, Manuela (Prüfungsberechtigt) • Vogeti, Sreekari (Prüfungsberechtigt) • Daeglau, Mareike (Prüfungsberechtigt) • Kristanto, Daniel (Prüfungsberechtigt) • Abdolalizadeh Saleh, Amirhussein (Prüfungsberechtigt) • Jacobsen, Nadine (Prüfungsberechtigt) • Short, Cassie Ann (Prüfungsberechtigt) • Klapprott, Melanie (Prüfungsberechtigt) • Kiene, Franziska (Prüfungsberechtigt) • Kiebs, Maximilian (Prüfungsberechtigt) • Burkhardt, Micha Jannis (Prüfungsberechtigt) • Angonese, Giulia (Prüfungsberechtigt) • Barton, Simon (Prüfungsberechtigt) • Mahadevan, Rachana (Prüfungsberechtigt) • Marsh, Nina (Prüfungsberechtigt) • Onken, Marc (Prüfungsberechtigt) • Postin, Danilo (Prüfungsberechtigt) • Spanknebel, Sebastian (Prüfungsberechtigt) • Müller, Christina (Prüfungsberechtigt) • Kumaravel, Velu Prabhakar (Prüfungsberechtigt) • Zaggia, Leonardo (Prüfungsberechtigt) • Michalke, Leo (Prüfungsberechtigt) • Park, Seonghun (Prüfungsberechtigt) • Marek, Merle (Module counselling)
Further responsible persons	Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for psy260.
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. **You can only start the practical project if you have passed the exam of psy240 (psy241)** **Computation in Neuroscience!** Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.

Skills to be acquired in this module	**Goals of module:** Students are able to critically review the scientific literature and current state of knowledge concerning a certain topic in the field of cognitive neuroscience or neuropsychology. Based on this, they are able to develop a specific research question and to design an adequate experiment, acquire data and conduct appropriate statistical analyses, building on previously gained competencies in relevant research methods, computer programming and statistical methods. They know how to critically discuss the results of their study in context of the current literature and how to present their findings at a scientific poster symposium. **Competencies:** ++ experimental methods + statistics & scientific programming ++ data presentation & discussion + independent research + scientific literature + ethics / good scientific practice / professional behavior + scientific communication skills + knowledge transfer + group work ++ project & time management
Module contents	• The students develop an empirical investigation, carry it out and analyse the results. • The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium. • Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis. • As part of the practical project, students should participate in studies of other practical projects!

Language of instruction	English
Duration (semesters)	1 Semester
Module frequency	The module will be offered every winter term.
Module capacity	unlimited
Reference text	Topics for projects will be presented in a colloquium at the end of the summer term. Students can chose to perform the practical work in either of the research groups of the Department of Psychology. External projects are possible upon approval (information and approval form can be found on the programme website).
Type of module	Pflicht / Mandatory
Module level	MM (Mastermodul / Master module)
Teaching/Learning method	practical work and regular seminar meetings in the group where the project is performed
Previous knowledge	PLEASE NOTE: Knowledge of either EEG, fMRI, TBS, or MEG data analysis, or knowledge of HCI or ambulatory assessment methods is essential for most projects offered in the Department of Psychology. We strongly recommend to take either psy170: Neurophysiology, psy270: fMRI Data Analysis, psy280: Transcranial Brain Stimulation, psy220: Human Computer Interaction, or psy290: Ambulatory Assessment prior to the practical project. It is expected that students have basic knowledge of Matlab programming

		before starting the practical project. This is proven by having passed the exam in Computation in Neuroscience.		
Examination	Prüfungszeiten		Type of examination	
Final exam of module	usually end of April		Poster presentation in a student symposium (30% of the grade) and daily project work (70% of the grade).	
Form of instruction	Comment	SWS	Frequency	Workload of compulsory attendance
Seminar	Please select the group in which you perform your practical project.	2	WiSe	28

Präsenzzeit Modul insgesamt				28 h

psy270 - Functional MRI Data Analysis

Module label	Functional MRI Data Analysis
Modulkürzel	psy270
Credit points	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	• Master's Programme Biology (Master) > Background Modules • Master's Programme Neurocognitive Psychology (Master) > Mastermodule • Master's Programme Neuroscience (Master) > Background Modules
Zuständige Personen	• Gießing, Carsten (module responsibility) • Gießing, Carsten (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology, Neuroscience, or Biology.
Skills to be acquired in this module	**Goals of module:** Students will learn the basics about planning and performing a neuroimaging study. They will focus on the statistical and methodological background of functional neuroimaging data analysis and analyse a sample functional MRI data set. **Competencies:** ++ experimental methods ++ statistics & scientific programming + data presentation & discussion ++ group work
Module contents	Theoretical knowledge on functional MRI data analysis Planning, performance and analysis of functional neuroimaging studies using MATLAB-based software Hands-on fMRI data analysis with SPM
Literaturempfehlungen	• Frackowiak RSJ, Friston KJ, Frith C, Dolan R, Price CJ, Zeki S, Ashburner J, and Penny WD (2003). Human Brain Function. Academic Press, 2nd edition. psy280 - Transcranial Brain Stimulation

Module label	Transcranial Brain Stimulation
Modulkürzel	psy280
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Herrmann, Christoph Siegfried (module responsibility) • Herrmann, Christoph Siegfried (Prüfungsberechtigt) • Strüber, Daniel (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will gain theoretical and practical knowledge on various non-invasive brain stimulation techniques. **Competencies:** ++ Neuropsychological / neurophysiological knowledge ++ experimental methods + statistics & scientific programming + scientific literature + ethics / good scientific practice / professional behaviour
Module contents	In this module, we will introduce the theoretical concepts, neurophysiological underpinnings and neurocognitive as well as clinical applications of various non-invasive brain stimulation techniques such as transcranial magnetic stimulation (TMS), transcranial direct current stimulation (tDCS), transcranial alternating current stimulation (tACS), and transcranial random noise stimulation (tRNS). A focus will be tACS, because it is especially suited to modulate brain oscillations which have been shown to correlate with cognitive processes. **Part 1: Introduction to transcranial brain stimulation (lecture): summer** • Historical overview of brain stimulation • Different techniques (TMS, tDCS, tACS, tRNS) • Physiological mechanisms (entrainment, after-effects etc.) • The use of transcranial brain stimulation in cognitive neuroscience - Experimental parameters (intensity, electrode montage, etc.) • Pros and cons of TMS vs. tACS • Technical aspects (artefact correction, modelling current flow, etc.) • Safety issues • Ethical considerations of brain stimulation **Part 2: Effects of tACS on physiology and cognition (seminar): summer** • Physiology of tACS (on-line and after-effects) • Modulating cognitive functions (e.g. memory, attention, and perception) • Clinical applications of tACS • Hands-on experience in the lab

Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Roheger, Mandy (module responsibility) • Roheger, Mandy (Prüfungsberechtigt) • Kiene, Franziska (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will acquire specific knowledge about ambulatory assessment methods in psychological and public health research. They will know about the historical development of ambulatory assessment methods, the advantages and challenges of these methods and statistical methods for analyzing longitudinal data collected in ambulatory assessment research. Students will generate an own research idea and conduct their own study using ambulatory assessment tools such as e.g. mobile surveys or motion sensors. Students will be able to collect, analyze and present their data using ambulatory assessment tools. **Competencies:** ++ Neuropsychological / neurophysiological knowledge ++ experimental methods ++ statistics & scientific programming + interdisciplinary knowledge & thinking + ethics / good scientific practice / professional behavior + critical & analytical thinking + project & time management
Module contents	**Part 1: Ambulatory Assessment in Psychology and Health Research (lecture): summer** • Definitions and historical overview of ambulatory assessment (AmbA) methods • Reasons to use AmbA methods • Introduction to different types of AmbA methods • Designing a study of daily life • Examples of usage of AmbA methods in different research fields and different research questions • Statistical analysis of longitudinal data **Part 2: Researching daily life (hands-on seminar): summer** • Formulating hypotheses • Selecting AmbA procedures and planning administration • Data collection • Evaluating the application of AmbA methods • Analyzing, summarizing and visualizing results

Further responsible persons	thesis supervisors; Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for mam.
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Completion of at least 60 credit points in other modules including module psy240 (psy241) (Computation in Neuroscience). Assignment of a topic by thesis supervisor and official application with the examination office.

Skills to be acquired in this module

Goals of module:
Students will demonstrate that they are able to perform a psychological or neuroscientific experiment and/or analyze data originating from such experiments by means of methods according to contemporary scientific standards. Metaanalyses are accepted if they were conducted by means of up to date tools for data extraction and analyses, according to best practices outlined in relevant community guidelines, such as for example Cochrane. In addition, the students will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form.

Competencies:
++ experimental methods
+ statistics & scientific programming
+ data presentation & discussion
++ independent research
+ scientific literature
++ scientific English / writing
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer
++ project & time management

Module contents	**Part 1: Master's thesis** The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods. **Part 2: Master's colloquium** The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.
