

Arbeitsgruppe: Applied Neurocognitive Psychology
Ansprechpartner: Jochem Rieger

Forschungsschwerpunkte und Interessen:

- Neural processing of complex natural stimuli (auditory and visual)
- Neural control of complex natural movements (reach and grasp)
- Brain Computer Interfacing for the monitoring of cognitive states and for robot control

Modellorganismen (wenn vorhanden):

The workgroup investigates neural function in humans.

Methoden:

- Expertise in a wide spectrum of neurophysiological Methods: MEG/EEG, fMRI, fNIRS, ECoG, and deep brain recordings.
- Data driven information mining approaches from statistical learning, linear systems analysis
- Online and single trial analysis.

Ausgewählte Publikationen der letzten fünf Jahre:

5. Chang E.F., Rieger J.W., Johnson K., Berger M.S., Barbaro N.M., Knight R.T. (2010) Categorical representation of phonemes in the human superior temporal gyrus. *Nature Neuroscience* 13: 1428–1432

(Angestrebte) Kooperationen/Projekte:

In the fields of systems/computational neuroscience, movement disorders, speech understanding production, movement control. We are also interested in specific motor and perceptual dysfunctions and dysfunctions of executive control.
